| Due Thursday, week 4 | Homework 2: Cayley Graphs |  |

Pick five of the problems in this set to solve! Solutions need justification and proof to receive full credit: i.e. it is not enough to simply draw the answer.

1. Draw the Cayley graph for the quaternion group $\left\langle a, b \mid a^{2}=b^{2}=(a b)^{2}\right\rangle$.
2. Create the Cayley graph for $S_{4}$ with generators $(1,2,3,4)$ and $(1,2)$.
3. Show that the dihedral group $D_{2 n}$ discussed in class can be expressed via the presentation $\left\langle a, b \mid a^{n}=b^{2}=(a b)^{2}=1\right\rangle$. Find its Cayley graph.
4. Let $\mathbb{Z}_{n}$ denote the group given by taking the set $\mathbb{Z} / n \mathbb{Z}$ along with the addition $\bmod n$ operation. Find the Cayley graph of $\mathbb{Z}_{n} \times \mathbb{Z}_{m}$ with respect to the generators $(1,0),(0,1)$, for any $n, m$.
5. For any odd $n$, find a group $G$ with generating set $S$ such that its Cayley graph is an oriented $K_{n}$. (An oriented $K_{n}$ is just a copy of the complete graph $K_{n}$ where we assign a direction to each edge. These graphs are also called tournaments.)
6. Let $Q_{n}$ denote the graph corresponding to the $n$-dimensional unit cube. Find a group $G$ with generating set $S$ such that its Cayley graph is the unoriented graph $Q_{n}$. (By an unoriented graph, we are asking that whenever we have an edge $(x, y)$ in our Cayley graph, we want to also have the reverse edge ( $y, x$ ).)
7. Recall, from last quarter, the following definitions:

Definition. Given two graphs $G_{1}, G_{2}$ with vertex sets $V_{1}, V_{2}$ and edge sets $E_{1}, E_{2}$, we say that a function $f: V_{1} \rightarrow V_{2}$ is an isomorphism if the following two properties hold:

- $f$ is a bijection.
- $(x, y)$ is an edge in $E_{1}$ if and only if $(f(x), f(y))$ is an edge in $E_{2}$.

An automorphism on a graph $G$ is an isomorphism from that graph to itself.
Using this definition, we say that a graph $G$ is vertex-transitive if given any two vertices $v_{1}, v_{2}$ of $G$, there is an automorphism $f$ on $G$ such that $f\left(v_{1}\right)=v_{2}$. In essence, vertextransitive graphs have a lot of symmetry: up to the labeling, we cannot distinguish any two vertices.

Prove that any Cayley graph is a vertex-transitive graph.
8. Prove or disprove: there is no group has the Petersen graph as its Cayley graph.
9. Prove or disprove: there is no group has the dodecahedron graph as its Cayley graph.
10. (Applicable mostly to students with musical background; from VanWyk's class at James Madison.) Consider the following "twelve-tone group," formed by taking the twelve pitches $C, C^{\sharp}, \ldots B$ :

|  | $C$ | $C^{\sharp}$ | $D$ | $D^{\sharp}$ | $E$ | $F$ | $F^{\sharp}$ | $G$ | $G^{\sharp}$ | $A$ | $A^{\sharp}$ | $B$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $C$ | $C$ | $C^{\sharp}$ | $D$ | $D^{\sharp}$ | $E$ | $F$ | $F^{\sharp}$ | $G$ | $G^{\sharp}$ | $A$ | $A^{\sharp}$ | $B$ |
| $C^{\sharp}$ | $C^{\sharp}$ | $D$ | $D^{\sharp}$ | $E$ | $F$ | $F^{\sharp}$ | $G$ | $G^{\sharp}$ | $A$ | $A^{\sharp}$ | $B$ | $C$ |
| $D$ | $D$ | $D^{\sharp}$ | $E$ | $F$ | $F^{\sharp}$ | $G$ | $G^{\sharp}$ | $A$ | $A^{\sharp}$ | $B$ | $C$ | $C^{\sharp}$ |
| $D^{\sharp}$ | $D^{\sharp}$ | $E$ | $F$ | $F^{\sharp}$ | $G$ | $G^{\sharp}$ | $A$ | $A^{\sharp}$ | $B$ | $C$ | $C^{\sharp}$ | $D$ |
| $E$ | $E$ | $F$ | $F^{\sharp}$ | $G$ | $G^{\sharp}$ | $A$ | $A^{\sharp}$ | $B$ | $C$ | $C^{\sharp}$ | $D$ | $D^{\sharp}$ |
| $F$ | $F$ | $F^{\sharp}$ | $G$ | $G^{\sharp}$ | $A$ | $A^{\sharp}$ | $B$ | $C$ | $C^{\sharp}$ | $D$ | $D^{\sharp}$ | $E$ |
| $F^{\sharp}$ | $F^{\sharp}$ | $G$ | $G^{\sharp}$ | $A$ | $A^{\sharp}$ | $B$ | $C$ | $C^{\sharp}$ | $D$ | $D^{\sharp}$ | $E$ | $F$ |
| $G$ | $G$ | $G^{\sharp}$ | $A$ | $A^{\sharp}$ | $B$ | $C$ | $C^{\sharp}$ | $D$ | $D^{\sharp}$ | $E$ | $F$ | $F^{\sharp}$ |
| $G^{\sharp}$ | $G^{\sharp}$ | $A$ | $A^{\sharp}$ | $B$ | $C$ | $C^{\sharp}$ | $D$ | $D^{\sharp}$ | $E$ | $F$ | $F^{\sharp}$ | $G$ |
| $A$ | $A$ | $A^{\sharp}$ | $B$ | $C$ | $C^{\sharp}$ | $D$ | $D^{\sharp}$ | $E$ | $F$ | $F^{\sharp}$ | $G$ | $G^{\sharp}$ |
| $A^{\sharp}$ | $A^{\sharp}$ | $B$ | $C$ | $C^{\sharp}$ | $D$ | $D^{\sharp}$ | $E$ | $F$ | $F^{\sharp}$ | $G$ | $G^{\sharp}$ | $A$ |
| $B$ | $B$ | $C$ | $C^{\sharp}$ | $D$ | $D^{\sharp}$ | $E$ | $F$ | $F^{\sharp}$ | $G$ | $G^{\sharp}$ | $A$ | $A^{\sharp}$ |

(a) Explain briefly why this group is isomorphic to $\mathbb{Z}_{12}$.
(b) Write out the Cayley graph given by this group, with generator $F$.
(c) Interpret (b): what is this structure?
